

Install Snipe-IT using Docker Compose on Ubuntu

1.Update Ubuntu

```
sudo apt update  
sudo apt upgrade -y
```

2.Install Docker

```
sudo apt install -y docker.io docker-compose-plugin
```

Check Docker:

```
docker --version  
docker compose version
```

Enable Docker:

```
sudo systemctl enable docker  
sudo systemctl start docker
```

Verify:

```
sudo systemctl status docker
```

3.Create Project Directory

```
mkdir ~/snipeit  
cd ~/snipeit
```

Copy your docker-compose.yml into this folder.

Check:

```
ls
```

You should see:

```
docker-compose.yml
```

4.Start Containers

`sudo docker compose up -d`

This will download:

- `mysql:5.7`
- `snipe/snipe-it:latest`

and create two containers:

- `snipe-mysql`
- `snipeit`

5.Verify Containers

`sudo docker ps`

Expected output:

CONTAINER ID	IMAGE	STATUS
xxxxxxx	mysql:5.7	Up
xxxxxxx	snipe/snipe-it:latest	Up

6.Open Snipe-IT

Open browser:

`http://YOUR_VM_IP:8080`

Example:

`http://172.18.8.15:8080`

7. Useful Docker Commands

View running containers:

```
sudo docker ps
```

View logs:

```
sudo docker logs snipeit
```

```
sudo docker logs snipe-mysql
```

Stop containers:

```
sudo docker compose down
```

Start again:

```
sudo docker compose up -d
```

Restart:

```
sudo docker compose restart
```

8. If Port 8080 Doesn't Open

Allow firewall:

```
sudo ufw allow 8080/tcp  
sudo ufw reload
```

Check listening port:

```
sudo ss -tulnp | grep 8080
```

Step 9 - Check Container Health

```
sudo docker inspect snipeit
```

or

```
sudo docker logs -f snipeit
```

Your compose file currently contains:

```
APP_URL: http://192.168.100.94:8080
```

If your Ubuntu VM IP is different (for example 172.18.8.x from pfSense DHCP), change it to:

```
APP_URL: http://YOUR_VM_IP:8080
```

Example:

```
APP_URL: http://172.18.8.15:8080
```

Then start it with:

```
sudo docker compose up -d
```
